

Code Original

Joseph D. Smith

Introduction

Imagine if there were an easier, more efficient, and an innovative way to encrypt messages, without the need to worry about some average-joe figuring them out?

That dream is now reality, and this book will help you understand this new concept, now known as “Code Original”!

Cellphones Are The 'Key'

Code Original started as a secret way for the founder to encrypt his passwords, so that nobody would ever figure out his passwords. But now, this method is coming out into the public! The 'Key' is through the numbers on a cellphone. You find the letter on the cellphone, and then you type in the number associated with it.

If you wanna type an “H”, you would instead type “4”, or when you want to type an “A”, you would instead type “2”. There is more to this code than mere numbers.

Spaces & Punctuation

When you type out a sentence, there is more to this code than just mere numbers. **Code Original** uses the number zero(0) for spaces, rather than just spacing the numbers out.

Code Original doesn't use punctuation. When you want to end the sentence, you don't type punctuation marks, and you also don't end the sentence with a zero(0). You end a sentence just by simply typing the last number.

Example Code

46902730968 means “How are you?”. Let us break it down for you:

469=How, 0 is the space, 273=are, 0 is the next space, and 968=you, and thus no punctuation.

Why **Code Original**?

Code Original is encrypted through the use of cellphone numbers, so that the code wouldn't be easy to figure out, because you don't know whether a “4” spells an “H”, or if it spells an “I”. It will take some time to get used to, but this code is very efficient and highly effective!
